EDUCATION

Florida International University

Bachelor of Arts, Computer Science

Miami, FL

Aug 2024 — Dec 2026

- Cumulative GPA: 3.77/4.0
- Relevant Coursework: Data Structures, Algorithm Techniques, Database Management, Advanced Database Management, Computer Architecture, Software Engineering, Operating Systems, Programming I & II

WORK EXPERIENCE

Software Engineer Intern

Jun 2026 — Aug 2026

Stealth Start-Up (AI Company)

Miami, FL

- Migrated an internal build-and-release tool from a single-user local **Docker Compose** setup to a horizontally scalable **ECS Fargate** deployment serving across all employees, rebuilding the backend as a **Python/Flask** REST API in a controller/service/repository architecture and aggregating build, test, and artifact data from **S3**, **CodePipeline**, and **Step Functions** via **boto3**
- Eliminated long-lived AWS credentials on developer machines by implementing **Okta** OIDC authentication with role-based access control and a token vending service issuing short-lived scoped credentials per request, limiting each user to only the resources their role permitted
- Replaced ad-hoc **CloudWatch** log digging with a unified, VPN-gated observability platform (**Grafana**, **Mimir**, **Loki**, **Tempo**, **Alloy**) provisioned as infrastructure-as-code with **TypeScript AWS CDK** across **ECS Fargate**, **S3**, **ALB**, and **PrivateLink**, architected for multi-tenant isolation
- Eliminated data loss during task restarts and scaling events by configuring **Mimir**, **Loki**, and **Tempo** as three-replica clusters using **memberlist** gossip-protocol coordination for replication and consistent hashing

Full-Stack Software Engineer Intern

May 2026

Global Empowerment Mission

Miami, FL

- Engineered a full-stack warehouse management system for a nonprofit as part of a 6-person team, building a **Next.js** 16 App Router, **TypeScript**, and **PostgreSQL** application with **Better Auth** session authentication, **Prisma ORM**, and a **TanStack Table** inventory dashboard
- Automated shipment documentation and audit logging, eliminating manual report steps, by integrating Google Drive PDF generation with React PDF and Google Sheets API logging triggered automatically on order creation
- Designed a normalized relational data model supporting pallets, donors, companies, and warehouses by authoring **Prisma migrations**, implementing a controller/service/repository architecture in the backend, and building dynamic React dropdowns with real-time add/delete via **REST APIs**

PROJECTS

Python, Flask, JavaScript, HTML, CSS, 8-Puzzle Game with Image Processing

Sep 2025

- Developed a web-based puzzle game that transforms user-uploaded images into playable sliding puzzles, implementing A* pathfinding with a Manhattan distance heuristic for optimal solution generation
- Built a RESTful API with a Flask backend and interactive frontend, achieving sub-second solve times for complex puzzles while supporting 5 different search algorithms for educational comparison

SKILLS

- **Programming Languages:** Rust, Python, TypeScript, Java, SQL
- **Frameworks and Libraries:** Next.js, React, Flask, FastAPI, Express.js, Tailwind CSS
- **Databases:** PostgreSQL, MySQL
- **Tools & Platforms:** AWS, AWS CDK, Docker, Grafana, Git, Linux, Neovim, Tmux

AWARDS

Summit Impact Award --- FIU, Knight Foundation School of Computing and Information Science

Oct 2025

- Recognized for delivering measurable impact through open-source contributions
